

RECM GLOBAL FLEXIBLE FUND (Class C)

Period ended 28 February 2015

RECM

The RECM Global Flexible Fund is a unit trust that may invest in equities, bonds, property, cash and offshore assets without any restrictions. The Fund's aim is to generate returns significantly greater than inflation over the long term while protecting capital against permanent loss through a rigorous adherence to a value-based philosophy. We consider risk as the possibility of losing money, not in terms of volatility. Our main risk management tool is our investment philosophy. As value investors, we aim to buy and hold good quality companies and do so with a margin of safety. Our ability to move between asset classes assists in reducing the risk in the fund.

INVESTMENT COMMENT

Despite the fact that our portfolios are skewed towards resource counters, where we have been finding the biggest discrepancies between price and value for some time now, we also own many shares unrelated to that sector that are unloved for issues specific to that company. Examples of such current portfolio holdings include Tesco (Largest UK retailer bashed by years of unrelenting competition of discounters, compounded by revelations of accounting scandal and subsequent change in management), Adcock Ingram (supposedly with weak product portfolio and poor management – especially in comparison to market darling Aspen), Blue Telecom (lack of trust in the management team and scepticism about their business model), JD Group (investor fatigue after years of disappointing results, and lack of interest due to a small free float), Standard Bank (the one South African bank that regularly seems to get caught out by foreign ventures such as Russia in '98, the London gold price fixing investigation and recently losses due to fraud in Aluminum stock piles in China) and Capitec (cheap as a result of the fear around companies operating in the micro-lending market after the ABIL collapse).

The reasons for these businesses being out of favour may be varied, but the common theme is that they are all trading at substantially less than we calculate them to be worth. Buying them at these prices translates into low investment risk, and substantial upside for our investors.

Disclaimer: Collective Investment Schemes in Securities (Unit trusts) are generally medium to long term investments. The value of participatory interests (units) may go down as well as up and past performance is not necessarily a guide to future performance. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The manager may borrow up to 10% of the market value of the portfolio where insufficient liquidity exists. A schedule of fees and charges and maximum commissions is available on request from the management company, RECM Collective Investments (Pty) Ltd (RECM). Commission and incentives may be paid and if so, would be included in the overall costs. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Different classes of units apply to these portfolios and are subject to different fees and charges. Unit trust prices are calculated on a net asset value basis, defined as the total market value of all assets in the unit portfolio including any income accruals and less any permissible deductions (brokerage, uncertificated securities tax, VAT, auditors' fees, bank charges, custodian fees, trustee fees, annual management fee and performance fees) from the portfolio divided by the number of units in issue. These portfolios may be closed. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. RECM Collective Investments (Pty) Ltd, Company Registration Number: 2004/027540/07, is a member of the Association for Savings and Investment SA (ASISA). Trustees: The Standard Bank of SA Limited, PO Box 54, Cape Town, 8000. A MEMBER OF THE ASSOCIATION FOR SAVINGS & INVESTMENT SA

RECM EQUITY FUND (Class D)

Period ended 28 February 2015

RECM

The RECM Equity Fund is a unit trust which invests exclusively in South African equities. The Fund's aim is to outperform the South African equity market over the long term by selecting shares based on a value philosophy. We consider risk as the possibility of losing money, not in terms of volatility. Our main risk management tool is our investment philosophy. As value investors, we aim to buy and hold good quality companies and do so with a margin of safety.

INVESTMENT COMMENT

Does RECM have too much exposure to resource stocks? Seven years ago resource stocks made up over 50% of the SA market. They were also the most expensive part of the market, with a price to book ratio of 4 times. At the time, RECM had a small weighting towards resource stocks, both in relative and absolute terms. Over the next 5 years, this sector proved to be the worst performing sector, despite appearing to have a very bright outlook in 2008. Many fund managers were overweight the sector at the time, implying a weighting of over 50% in resource stocks.

Today however, the resource sector makes up less than a quarter of the SA market and it is the cheapest sector trading at a price to book ratio of about 1.5 times. By comparison, the financial and Industrial sectors look increasingly expensive. RECM currently has significantly more exposure to resource stocks than the market. Despite being very underweight the industrial sector in absolute terms given its increase as a percentage of the overall market, our position size in industrial stocks is almost on par with that of resource stocks. However it is worth mentioning that the industrial stocks we own are very different to those that are the largest and most expensive in the index. From the above, we think a fair conclusion would be that we are not too concentrated in the resource sector. Additionally, the sector presents a good value investment proposition. The corollary bears questioning. If the Industrial index is 56% of the market, and a manager is overweight Industrials, are they not too concentrated in an expensive sector?

RECM GLOBAL FEEDER FUND (Class C)

Period ended 28 February 2015

RECM

The RECM Global Feeder Fund is a Rand denominated fund that provides local investors with access to the RECM Global Fund. The RECM Global Fund is a US dollar denominated global fund that may invest in a wide array of assets without any restrictions. The Fund's aim is to generate returns significantly greater than US inflation and commensurate with equities over the long term. The fund invests mainly in large global companies at a significant discount to intrinsic value, while using the flexibility of the mandate to protect capital and enhance returns by investing in other mispriced global assets from time to time. We consider risk as the possibility of losing money, not in terms of volatility. Our main risk management tool is our investment philosophy. As value investors, we aim to buy and hold good quality companies and do so with a margin of safety. Our ability to move between asset classes assists in reducing the risk in the fund.

INVESTMENT COMMENT

Despite the fact that our portfolios are skewed towards cyclical and resource counters, where we have been finding the biggest discrepancies between price and value for some time now, we also own many shares unrelated to that sector that are unloved for issues specific to that company.

Examples of such current portfolio holdings include Tesco (Largest UK retailer bashed by years of unrelenting competition of discounters, compounded by revelations of accounting scandal and subsequent change in management), AIG (Large global insurer, suffering from continued distrust after a near-death experience caused by a small subsidiary during the global financial crisis), NTT DoCoMo (Largest incumbent Japanese mobile operator, which stubbornly refused to sell iPhones to its customers for years, and has been enduring consistent small losses in market share), Semapa (A largely family-owned Portuguese industrial group, with major interests in forestry and paper - through listed subsidiary Portucel - and cement businesses. Investors are perturbed by its tiny free float and debt on the balance sheet) and Mediaset Espana (Largest free-to-air television network in Spain, that counts Silvio Berlusconi's Mediaset as its largest shareholder and was priced to discount permanent destruction in Spanish advertising spend).

The reasons for these businesses being out of favour may be varied, but the common theme is that they are all trading at substantially less than we calculate them to be worth. Buying them at these prices translates into low investment risk, and substantial upside for our investors.

Disclaimer: Collective Investment Schemes in Securities (CIS) should be considered as medium-to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS are traded at the ruling price and can engage scrip lending and borrowing up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from Prescient Management Company Ltd. Commission and incentives may be paid and if so, would be included in the overall costs. Different classes of units may apply in a portfolio and are subject to different fees and charges. A fund of funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios. A Feeder Fund is a portfolio that, apart from assets in liquid form, consists solely of participatory interests in a single portfolio of a collective investment scheme. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of any underlying international investments to go up and down. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (Brokerage, STI, VAT, Auditor's fees, Bank Charges, Trustee and Custodian fees and the annual Management fee) from the portfolio divided by the number of participatory interests (units) in issue. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase-in period TER's do not include information gathered over a full year.

RECM GLOBAL EQUITY FEEDER FUND (Class C)

Period ended 28 February 2015

RECM

The RECM Global Equity Feeder Fund is a Rand denominated fund that provides local investors with access to the RECM Global Equity Fund. The RECM Global Equity Fund is a US dollar denominated offshore fund which invests exclusively in Global Equities. It aims to generate better returns than the MSCI World All Countries TR Index over the long term by selecting shares based on a value philosophy. Investors in this fund would seek long term outperformance of the passive alternatives which are derived from our stock picking skills, rather than protection against short term market volatility. We consider risk as the possibility of losing money, not in terms of volatility. Our main risk management tool is our investment philosophy. As value investors, we aim to buy and hold good quality companies and do so with a margin of safety.

A schedule of fees and charges and maximum commissions is available on request from the management company, RECM Collective Investments (Pty) Ltd (RECM). Commission and incentives may be paid and if so, would be included in the overall costs. A Feeder Fund is a portfolio that, apart from assets in liquid form, consists solely of participatory interests in a single portfolio of a collective investment scheme. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Different classes of units apply to these portfolios and are subject to different fees and charges. Unit trust prices are calculated on a net asset value basis, defined as the total market value of all assets in the unit portfolio including any income accruals and less any permissible deductions (brokerage, uncertificated securities tax, VAT, auditors' fees, bank charges, custodian fees, trustee fees, annual management fee and performance fees) from the portfolio divided by the number of units in issue. These portfolios may be closed. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. RECM Collective Investments (Pty) Ltd, Company Registration Number: 2004/027540/07, is a member of the Association for Savings and Investment SA (ASISA). Trustees: The Standard Bank of SA Limited, PO Box 54, Cape Town, 8000.

RECM GLOBAL FUND (Class B)

Period ended 28 February 2015

RECM

The RECM Global Fund is a US dollar denominated global fund that may invest in a wide array of assets without any restrictions. The Fund's aim is to generate returns significantly greater than US inflation and commensurate with equities over the long term. The Fund invests mainly in large global companies at a significant discount to intrinsic value, while using the flexibility of the mandate to protect capital and enhance returns by investing in other mispriced global assets from time to time. We consider risk as the possibility of losing money, not in terms of volatility. Our main risk management tool is our investment philosophy. As value investors, we aim to buy and hold good quality companies and do so with a margin of safety. Our ability to move between asset classes assists in reducing the risk in the fund. The Offering Memorandum is available at www.recm.co.za.

INVESTMENT COMMENT

Despite the fact that our portfolios are skewed towards cyclical and resource counters, where we have been finding the biggest discrepancies between price and value for some time now, we also own many shares unrelated to that sector that are unloved for issues specific to that company.

Examples of such current portfolio holdings include Tesco (Largest UK retailer bashed by years of unrelenting competition of discounters, compounded by revelations of accounting scandal and subsequent change in management), AIG (Large global insurer, suffering from continued distrust after a near-death experience caused by a small subsidiary during the global financial crisis), NTT DoCoMo (Largest incumbent Japanese mobile operator, which stubbornly refused to sell iPhones to its customers for years, and has been enduring consistent small losses in market share), Semapa (A largely family-owned Portuguese industrial group, with major interests in forestry and paper - through listed subsidiary Portucel - and cement businesses. Investors are perturbed by its tiny free float and debt on the balance sheet) and Mediaset Espana (Largest free-to-air television network in Spain, that counts Silvio Berlusconi's Mediaset as its largest shareholder and was priced to discount permanent destruction in Spanish advertising spend).

The reasons for these businesses being out of favour may be varied, but the common theme is that they are all trading at substantially less than we calculate them to be worth. Buying them at these prices translates into low investment risk, and substantial upside for our investors.

Disclaimer: Collective Investment Schemes in Securities are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to the future. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Collective investments are traded at ruling prices. The manager may borrow up to 10% of the net asset value of the portfolio where insufficient liquidity exists. A schedule of fees and charges and maximum commissions is available from the company/ scheme. Commission and incentives may be paid and if so, would be included in the overall costs. The quantifiable deduction is the annual management fee (and performance fee if applicable), whilst non-quantifiable fees included in the net asset value price may comprise brokerage, auditor's fees, bank charges, trustee and custodian fees. Collective investment prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accrual and less any permissible deductions from the portfolio. Forward pricing is used. The Management Company is RECM Global Management Limited. The Custodian is Royal Bank of Canada (Channel Islands) Limited and the Administrators are Kleinwort Benson (Channel Islands) Fund Services Limited. The Fund's annualised Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. This fact sheet should be read in conjunction with the "Schedule of Similarities and Differences" available on the website. RECM Collective Investments (Pty) Ltd is a member of the Association for Savings and Investment SA (ASISA).

RECM GLOBAL EQUITY FUND (Class B)

Period ended 28 February 2015

RECM

The RECM Global Equity Fund is a US dollar denominated offshore fund which invests in Global Equities. It aims to generate better returns than the MSCI World All Countries TR Index over the long term by selecting shares based on a value philosophy. Investors in this fund would seek long term outperformance of the passive alternatives which are derived from our stock picking skills, rather than protection against short term market volatility. We consider risk as the possibility of losing money, not in terms of volatility. Our main risk management tool is our investment philosophy. As value investors, we aim to buy and hold good quality companies and do so with a margin of safety.
