About the Fund

The RE:CM Flexible Equity Fund is an SA Equity Fund and has the flexibility to default to cash when we can't find value in equities. It aims to generate better returns than the FTSE JSE All Share Index (including income) over the long term with lower than average risk of capital loss and with less volatility than the index. This fund is suited to investors seeking long-term wealth creation through SA equity exposure, and who are comfortable with short-term volatility.

Fund Objective

The portfolio objective is to seek long-term capital growth with a level of risk acceptable to the more aggressive investor.

Risk Measures

We look at risk in terms of losing money, not in terms of volatility. Our main risk management tool is our investment philosophy. As value investors, we aim to buy and hold good quality companies and do so with a margin of safety. Our ability to hold cash offers additional comfort when equities are expensive.

INVESTMENT COMMENT

Resource and basic materials shares continue to dominate our list of recent purchases, including Arcelor Mittal, Anglo American and Impala Platinum. Arcelor Mittal is the largest steel producer in South Africa and has declined substantially over the last few years as construction activity slowed after the 2010 World Cup. We discussed previously that the discount to intrinsic value was favourable enough at the time to justify a small position. This discount to intrinsic value increased substantially due to price declines over the last six months allowing the Fund to increase the position further. Impala Platinum's share price was adversely affected by the negative sentiment surrounding the platinum sector. This offered us an opportunity to allocate capital to the business well after we had bought the other platinum miners. Impala is the lowest cost producer in South Africa and controls good assets in Zimbabwe (Zimplats). Even though we assumed the worst possible outcome for Zimbabwe, there was a sufficient margin of safety to justify a significant position in the stock. Impala's share price is up more than 20% over the past 6 months, but still remains one of the Fund's Top 10 holdings along with the other large platinum producers, Anglo Platinum and Lonmin. The Fund increased its position in Lonmin by taking up its rights to the deeply discounted rights offer that now allows Lonmin to complete its capital projects using equity rather than debt in this highly cyclical industry.

Disclaimer: Collective Investment Schemes in Securities (Unit trusts) are generally medium to long term investments. The value of participatory interests (units) may go down as well as up and past performance is not necessarily a guide to future performance. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The manager may borrow up to 10% of the market value of the portfolio where insufficient liquidity exists. A schedule of fees and charges and maximum commissions is available on request from the management company, RE:CM Collective Investments (Pty) Ltd (RE:CM). Commission and incentives may be paid and if so, would be included in the overall costs. Forward pricing is used. Funds are valued daily at 15h00. Instructions must reach RE:CM before 14h00 to ensure same day value. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Different classes of units apply to these portfolios and are subject to different fees and charges. Unit trust prices are calculated on a net asset value basis, defined as the total market value of all assets in the unit portfolio including any income accruals and less any permissible deductions (brokerage, uncertificated securities tax, VAT, auditors' fees, bank charges, custodian fees, trustee fees, annual management fee and performance fees) from the portfolio divided by the number of units in issue. These portfolios may be closed. RE:CM Collective Investments (Pty) Ltd, Company Registration Number: 2004/027540/07, is a member of the Association for Savings and Investment SA (ASISA). Trustees: The Standard Bank of SA Limited, PO Box 54, Cape Town, 8000. The RE:CM Flexible Equity Fund Class D has a Total Expense Ratio of 1.15%. For the period from 01 January 2012 to 31 December 2012, 1.15% of the average Net Asset Value of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER can not be regarded as an indication of future TER's. Inclusive of the TER of 1.15%, a performance fee of 0.0% of the Net Asset Value of the class of participatory interest in the portfolio was recovered.
