About the Fund

The RE:CM Global Flexible Fund is a rand denominated worldwide balanced fund that may invest in equities, bonds, property, cash and offshore assets. Funds are shifted between various asset classes to take advantage of areas of value.

Fund Objective

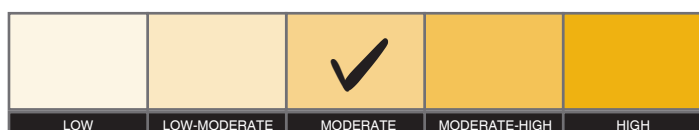

The primary objective of the portfolio is to generate returns greater than inflation over the long term with lower than average risk for investors.

Risk Measures

We look at risk in terms of losing money, not in terms of volatility. Our main risk management tool is our investment philosophy. As value investors, we aim to buy and hold good quality companies and do so with a margin of safety. Our ability to move between asset classes assists in reducing the risk in the fund.

RISK STATISTICS AND PORTFOLIO DETAIL

FUND PROFILE

• This fund has a moderate risk profile

TOP HOLDINGS (%)

INVESTMENT COMMENT

With emerging markets, including South Africa, priced at a premium to developed markets, a material repositioning away from risk should result in a sell-off of emerging market assets as well as currencies. The RE:CM Global Flexible Fund is very conservatively positioned at present, being predominantly invested in the equity of high quality businesses with pricing power and low levels of financial leverage. Although we have reduced the fund's exposure to the South African equity market over the last year and increased our allocation offshore ie to developed markets, we have recently allocated limited capital to domestic commodity companies that have presented us with a compelling price to value opportunity. There is no exposure to government bonds in the fund; only a limited exposure to a senior corporate bond. The two listed property companies which the fund holds operate within a niche segment of the broader property market which we believe they can exploit, due to the small size of assets which they have under management. Cash exposure in the fund is only to high quality money market assets.

Disclaimer: Collective Investment Schemes in Securities (Unit trusts) are generally medium to long term investments. The value of participatory interests (units) may go down as well as up and past performance is not necessarily a guide to future performance. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The manager may borrow up to 10% of the market value of the portfolio where insufficient liquidity exists. A schedule of fees and charges and maximum commissions is available on request from the management company, RE:CM Collective Investments (Pty) Ltd (RE:CM). Commission and incentives may be paid and if so, would be included in the overall costs. Forward pricing is used. Funds are valued daily at 15h00. Instructions must reach RE:CM before 14h00 to ensure same day value. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Different classes of units apply to these portfolios and are subject to different fees and charges. Unit trust prices are calculated on a net asset value basis, defined as the total market value of all assets in the unit portfolio including any income accruals and less any permissible deductions (brokerage, uncertificated securities tax, VAT, auditors' fees, bank charges, custodian fees, trustee fees, annual management fee and performance fees) from the portfolio divided by the number of units in issue. These portfolios may be closed. RE:CM Collective Investments (Pty) Ltd, Company Registration Number: 2004/027540/07, is a member of the Association for Savings and Investment SA (ASISA). Trustees: The Standard Bank of SA Limited, PO Box 54, Cape Town, 8000. The RE:CM Global Flexible Fund Class A has a Total Expense Ratio of 1.34%. For the period from 01 April 2011 to 31 March 2012, 1.34% of the average Net Asset Value of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER can not be regarded as an indication of future TER's. Inclusive of the TER of 1.34%, a performance fee of 0.0% of the Net Asset Value of the class of participatory interest in the portfolio was recovered.
