

RECM GLOBAL FLEXIBLE FUND (Class C)

Period ended 30 April 2014

RECM

The RECM Global Flexible Fund is a unit trust that may invest in equities, bonds, property, cash and offshore assets without any restrictions. The Fund's aim is to generate returns significantly greater than inflation over the long term while protecting capital against permanent loss through a rigorous adherence to a value-based philosophy. We consider risk as the possibility of losing money, not in terms of volatility. Our main risk management tool is our investment philosophy. As value investors, we aim to buy and hold good quality companies and do so with a margin of safety. Our ability to move between asset classes assists in reducing the risk in the fund.

INVESTMENT COMMENT

A key aspect of our investment thesis in platinum counters is that reduced supply (capacity closure) meets increasing demand (nascent European and US economic recovery), leading to a metal supply/demand shortfall and a related platinum price recovery. After two years it's still relatively early days in terms of this thesis, but so far, we have seen reduced supply via a combination of mine closures (permanent and semi-permanent i.e. mothballed), bankruptcy or near-bankruptcy of smaller firms and lengthy strike action. On the demand side the data supports the beginning of an economic recovery in Europe and the USA and an upturn in vehicle sales. The PGM (platinum-group metals) basket price has moved up nicely, but almost all of the price strength has been in palladium and rhodium, which leaves us somewhat puzzled as to the lagging price behaviour of platinum itself. What many casual observers don't realize is that palladium and rhodium are quite significant revenue and profit contributors to our investee companies. Our best thinking at this point in time is that it is taking a bit longer than we thought for excess platinum inventories to be worked through the system between primary producers, converters, end users and recyclers. Despite the ongoing strike and the lagging platinum price, the share prices of our investee companies have responded positively and strongly.

Disclaimer: Collective Investment Schemes in Securities (Unit trusts) are generally medium to long term investments. The value of participatory interests (units) may go down as well as up and past performance is not necessarily a guide to future performance. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The manager may borrow up to 10% of the market value of the portfolio where insufficient liquidity exists. A schedule of fees and charges and maximum commissions is available on request from the management company, RECM Collective Investments (Pty) Ltd (RECM). Commission and incentives may be paid and if so, would be included in the overall costs. Forward pricing is used. Funds are valued daily at 15h00. Instructions must reach RECM before 14h00 to ensure same day value. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Different classes of units apply to these portfolios and are subject to different fees and charges. Unit trust prices are calculated on a net asset value basis, defined as the total market value of all assets in the unit portfolio including any income accruals and less any permissible deductions (brokerage, uncertificated securities tax, VAT, auditors' fees, bank charges, custodian fees, trustee fees, annual management fee and performance fees) from the portfolio divided by the number of units in issue. These portfolios may be closed. RE-CM Collective Investments (Pty) Ltd, Company Registration Number: 2004/027540/07, is a member of the Association for Savings and Investment SA (ASISA). Trustees: The Standard Bank of SA Limited, PO Box 54, Cape Town, 8000. The RECM Global Flexible Fund Class C has a Total Expense Ratio of 5.06%. For the period from 1 April 2013 to 31 March 2014, 5.06% of the average Net Asset Value of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER can not be regarded as an indication of future TER's. Inclusive of the TER of 5.06%, a performance fee of 3.14% of the Net Asset Value of the class of participatory interest in the portfolio was recovered.
